

See what your city has to say.

Stae is a universal tool for data management and collaboration. Cities can integrate data from any source, map different data types, and create real-time data feeds.

Solutions

Here are a few ways cities use Stae to optimize their operations.

Capture Data

Manage data as an open, public utility—from data standardization and warehousing to API integration. **Core Features:** Import and Transform Data, Publish APIs and Export to popular tools, Manage Permissions.

Drive Performance

Bring data to problem-solving and planning—from data-driven performance management to automated regulation and insights. **Core Features:** 40+ Preloaded City Data Schemas, Custom Dashboards and Data Cards, Support for Issue-Specific Data Types.

Manage Vendors

Receive and share real-time data between cities and vendors—from standardized integrations to ensuring data-sharing compliance. **Core Features:** Real-time API integration, Automated Notifications for Compliance and Payments, Standardized Data Schemas across vendors.

Build Community

Publish and share open data with partners and public audiences—from providing real-time data to developers to meeting transparency standards. **Core Examples:** App Integration, Data-Driven Research, Community Asset Mapping and Engagement.
